METHODS AND SYSTEMS FOR MANAGING AND CONTROLLING AN AUTOMATION CONTROL MODULE SYSTEM

ABSTRACT OF THE DISCLOSURE

A web-enabled automation control module (ACM) system includes at least one network module configured to receive a request for a file from the network, a web server and database module located outside the network module and including a database configured to store the file, and an ACM central processing unit (CPU) configured to send ACM data to the web server and database module to embed ACM data in the file.
